

Net Surplus Electricity Election Form

General Instructions

You are currently receiving electric service as a net energy metering customer of Alameda Municipal Power ("AMP"). In accordance with Assembly Bill 920 (Stat. 2009, Chapter 376), which amended California Public Utilities Code section 2827, if you are an eligible customer-generator and are determined to be a net surplus customer-generator, then you may be eligible in the future to either (A) receive compensation for any net surplus electricity generated at your premises during a specified 12-month period, or (B) apply the net surplus electricity as a credit for electricity, measured in kilowatt-hours, subsequently supplied by AMP to you, provided that you make an election, noted below.

If you choose to make an election and your PV system is already connected to the grid, AMP will start the first 12-month period on the day after we receive this form. For example, if AMP receives your election form on February 15, 2010, the first 12-month period for net surplus electricity compensation purposes will start on February 16, 2010 and run through February 15, 2011. If you choose to make an election and your PV system is not already connected to the grid, AMP will start the first 12-month period on the day of interconnection. *If you do not make an election, then AMP will not be obligated to compensate or issue any bill credit to you, and AMP will retain any net surplus electricity generated.*

Election Procedure

Please complete this form and send it to Alameda Municipal Power, Solar Program, by any of the following methods:

- Facsimile transmission (FAX): (510) 748-3975
- Courier or in person: 2000 Grand Street; Alameda, CA 94501
